

2016 INVESTIGATOR PRESENTATION SCHEDULE

NOVEMBER 12 – 16

About the TIMI Study Group

Since its inception in 1984, the principal goal of the TIMI Study Group has been to conduct high quality clinical trials that enhance the care of patients suffering from cardiovascular disease and its risk factors. TIMI has led a wide array of phase 1 to phase 4 trials, as well as registries. These have ranged in size from less than 30 to 30,000 subjects. The interventions studied include fibrinolytic, antithrombotic, anti-platelet, anti-ischemic, lipid lowering, anti-inflammatory, and anti-diabetic agents as well as percutaneous coronary intervention. In addition, the TIMI Study Group has used its growing database of more than 300,000 subjects and their clinical findings, electrocardiograms, angiograms, biomarkers, and genotypes to enhance the understanding of cardiovascular disease and its risk factors. An important corollary goal has been to train the next generation of clinical investigators. TIMI is especially proud of these trainees who have assumed leadership positions in leading institutions around the world.
